Langan utilizes the latest GIS solutions to achieve our client's objectives. Langan's technical staff has developed an expertise on the use of GIS for visualization, analysis, and management purposes. Our staff are experts in the use of Esri's® ArcGIS suite of applications including ArcMap and ArcGIS Server along with their assorted extensions as well as various Open Source GIS programs. In addition to being experts in GIS, our staff are also well versed in the integration of other software packages such as AutoCAD, Microstation, and Terramodel. We frequently integrate GIS with our Survey Department for terrestrial surveys, BIM modeling, and Mobile Scanning. In addition, our GIS services interoperate with our Data Management group to provide custom database solutions. Langan also has the capabilities to deliver all of our GIS solutions to our clients via custom-off-the-shelf web and mobile solutions developed using Esri and Open Source API's.
